

"Ask For It By Name"

The Premium Water Powered Backup Sump Pump

Basepump is an extremely reliable, very powerful, **water powered** backup sump pump system. With no battery to wear out or maintain, **no charger** to plug in or monitor, it is designed as an automatic, **independent** system from the primary sump pump. Basepump is essentially in a class by itself. Mounted on the ceiling, high above the sump, it doesn't have to fight the downward force of the water that most competitors' pumps must push up vertically. For this reason, Basepump consistently removes more water per hour than other water powered backup sump pumps and even rivals the best battery powered backup sump pumps, short- and long- term. Period. So instead of a flooded basement because of a sump pump failure or a power failure, install a water powered Basepump backup sump pump before it happens.

**Discharge water
exits here**

**Municipal water
enters here**

Sump water is drawn up into here

When the water in your sump rises above normal for any reason, the Basepump float is lifted. This activates a valve, sending municipal water under pressure through the Basepump Ejector. Then, acting like a giant soda straw, it draws the sump water up and ejects it to the outdoors. As the float returns to its lowest level, the pumping stops after a pre-set period of time, draining the sump down until the water rises above normal again and the cycle starts all over again.
